

# JOIN THE WINDOW MAKING REVOLUTION

With Masterwood's new Atlas K range of CNC machining centres, you can halve the time it takes to produce bespoke timber windows.

That's because it comes with the option of fitting up to four 320mm diameter tools for tenoning, something no other machining centre manufacturer can offer.

Not only does the Atlas slash the time taken by traditional window lines, it carries out **all** window component operations from cutting to exact window size, tenoning and linear profiling to cutting out glass beads, storm proofing and producing glazing bars.

It even handles air vents, key and handle holes, locks, plus any other milling operation needed, and can produce arched versions.

Plus there is the small matter that it costs less than a window line.

Benefits you would expect from the world's leading supplier of specialist CNC machining centres for the joinery industry.

To find out how you can boost your window making profitability, call Masterwood today and ask to see a CD of the top quality Atlas in action.
